

5. Interpret the coefficient corresponding to the "Adelie" indicator variable in the context of the problem in 1-2 sentences.
6. Now consider the relationship between bill length and bill depth when broken down by species. **Sketch** (*do not write code*) a plot which can be used to summarize the relationship between all three variables. Depict a shape which reflects your expectation of this relationship. **State** (*do not write code*) the aesthetic mappings and geometry involved in the plot as per the Grammar of Graphics. Finally, label your axes and give the plot a title.
